

EDGECONNECT

Extend your core. **Expand your service.**

EDGE CONNECT is a high-performance API platform that bridges the gap between your self-service hardware and your core banking system—enabling real-time “On-U” transactions and Advanced Account Access.

THE FRICTION

- Branch pressure caused by routine transactions that should be self-service.
- High “cost-to-serve” for routine deposits and loan payments.
- Disconnected channels limiting customer visibility of total relationship.
- Dependency on expensive, rigid ITM subscription rates for basic functionality.

Experience APIs (The Interface)

Dynamic interaction between ATM software and the Edge switch.

Process APIs (The Logic)

Developed in-house by Edge One to orchestrate complex transaction routing.

System APIs (The Connectors)

Direct, secure hooks into Jack Henry, Fiserv, FIS, and Finastra cores.

■ Reduce Branch Load

■ Real-Time On-U

TRANSACTION CAPABILITIES

- **Full Deposits:** Mixed media, cash, and multi-check deposits.
- **Loan Servicing:** Real-time payments via cash, check, or transfer.
- **Account Access:** Credit cards, Money Markets, and Statements.
- **Live On-U:** Immediate balance updates and authentication.
