

EDGENOW

The ATM channel shouldn't be hard to **change**.

EDGE NOW replaces static legacy drivers with a cloud-native platform that gives financial institutions direct, real-time control over their entire ATM channel. No waiting on vendor deployments or release cycles required.

THE FRICTION

- Rigid, static ATM drivers that are difficult and expensive to change.
- Long development cycles (6-12 months) for even minor UI or logic updates.
- Manual intervention that increases downtime and operational risk.
- Heavy dependency on vendor roadmaps that limits innovation and control.

Direct UI Control

Define screen flows and user experience instantly without vendor deployments.

API Configuration

Transition from code-heavy updates to safe, rapid API-based logic changes.

Zero Downtime

Containerized architecture keeps the network live during maintenance.

Future Evolution

Native support for contactless, NFC, and mobile-initiated transactions.

STRATEGIC AUTONOMY

- **Scale Cleanly:** Horizontal scaling adapts to volume without rebuilds.
- **Zero Freeze:** Granular updates remove seasonal deployment lockdowns.
- **Human Support:** Direct access to engineers, not generic ticket queues.
- **Visibility:** Full real-time reporting and system performance transparency.
